

Aceva

Meeting Guide - Correct Sequence

Final one-month strategy, assembled in meeting order

"We will not compete by saying more. We will compete by proving more."

Constraint Start from zero, no operating budget, one-month launch window.	Team 5 senior professionals + 5 juniors, with seniors reviewing production work.
Market Sell from New York and compete globally, while engineering operates from Pakistan.	Goal A normal full-service software house with a website and buying experience that feels ahead of the market.

Use this tomorrow

Read the vision first. Then use the decision pages to assign owners, deliverables and deadlines. Do not spend the whole meeting discussing colors or slogans.

READ IN THIS ORDER

The meeting sequence

This edition is arranged as one continuous founder journey: understand the company, lock the offer, design the website, assign the build, then run the meeting.

1

Understand the mission

Pages 3-4: what Aceva is, what the market already offers and why AI alone is not differentiation.

2

Lock the five capabilities

Pages 5-10: the final offer and exactly what each capability includes, sells and proves.

3

Lock the competitive experience

Page 11: how Aceva wins through proof, rescue, senior review, ownership and weekly visibility.

4

Lock the website

Pages 12-14: the sitemap, exact homepage copy and what visitors must be able to see.

5

Lock the one-month build

Pages 15-16: the zero-budget schedule and the 5-senior/5-junior structure.

6

Run tomorrow's meeting

Pages 17-20: agenda, decisions, opening speech and sales language.

7

Launch only after checking

Pages 21-22: launch gate, market sources and final warning.

How to use it

Start at this page and continue forward. Do not jump between sections during the meeting. Every section prepares the decision that comes next.

SECTION 01

STEP 1 - The decision we are locking

Aceva is a normal software house. The difference is how it presents, sells and delivers.

Final positioning

Aceva builds digital experiences, custom software, mobile products, intelligent automation, and rescues software that is unfinished or unreliable.

- New York market access gives Aceva proximity to buyers and real business problems.
- Pakistan engineering gives Aceva delivery capacity and a talent-development engine.
- The website must feel like a product, not a brochure full of technology logos.
- The company should sell outcomes and clear next steps, not only developer hours.
- AI is used for speed, but senior humans remain responsible for quality and security.

What we are not claiming

We are not claiming that the five services are unique. Global firms already sell them. Aceva will differentiate through clarity, proof, Product Rescue, client ownership and transparent delivery.

SECTION 02

STEP 2 - Verified market reality

Why the word AI is not enough.

-
- Global consultancies already sell custom software, AI, product engineering, cloud and modernization.
 - Top firms position around measurable outcomes, responsible delivery, design quality and long-term modernization.
 - AI-assisted coding is becoming normal; the advantage is the review process, architecture, security and customer experience around it.
 - Software rescue and modernization already exist in the market, but Aceva can make the offer simpler and more understandable for startups and small-to-mid-sized businesses.

"The opportunity is not to invent a category. It is to package familiar capabilities in a clearer, faster and more trustworthy way."

Competitor lesson

Do not try to beat global firms by listing more services. Beat ordinary agencies by making the buyer journey easier: diagnose, prove, build, launch and improve.

SECTION 03

STEP 3 - The final five capabilities

Keep these five and do not add more at launch.

1

CAPABILITY 1 - Digital Experiences

Premium websites, e-commerce, portals and customer-facing platforms.

2

CAPABILITY 2 - Custom Software

SaaS products, dashboards, marketplaces and internal business systems.

3

CAPABILITY 3 - Mobile Products

iOS, Android and cross-platform applications for customers and teams.

4

CAPABILITY 4 - Intelligence & Automation

AI assistants, workflow automation, integrations, knowledge systems and reporting.

5

CAPABILITY 5 - Product Rescue & Reliability

Audit, stabilize, secure and modernize unfinished, outdated or AI-generated software.

Homepage line

Five capabilities. One accountable engineering partner.

SECTION 04

CAPABILITY 1 - Digital Experiences

Websites and digital platforms designed to attract, convert and serve customers.

What it includes

- Corporate and startup websites
- E-commerce and booking experiences
- Customer portals and dashboards
- Landing pages and conversion journeys
- UX/UI design systems

When to sell it

A business needs a new digital presence or its current website looks weak, slow or confusing.

Sales line

We design digital experiences that make the business easier to understand, trust and use.

Proof the website should show

Show one premium Aceva website concept with strong mobile behavior, speed and a real lead flow.

Do not overpromise

Do not promise guaranteed sales or search rankings.

SECTION 05

CAPABILITY 2 - Custom Software

Software built around the way a business actually operates.

What it includes

- SaaS products
- Internal management systems
- Operational dashboards
- Marketplaces and portals
- Custom web applications and integrations

When to sell it

Off-the-shelf software no longer fits the client's workflow or business model.

Sales line

We engineer systems around your operation - not the other way around.

Proof the website should show

Show a clean operations dashboard with users, permissions, tasks, data and reporting.

Do not overpromise

Do not accept a large build without written scope, milestones and acceptance criteria.

SECTION 06

CAPABILITY 3 - Mobile Products

Mobile experiences designed for adoption, performance and growth.

What it includes

- iOS applications
- Android applications
- Cross-platform products
- Customer self-service apps
- Employee and field-work apps

When to sell it

The client needs customers or employees to complete important work from a phone.

Sales line

We build mobile products people can understand, trust and continue using.

Proof the website should show

Show one interactive app prototype with a complete user journey, not ten disconnected screens.

Do not overpromise

Do not promise separate native iOS and Android builds if the team plans only a cross-platform solution.

SECTION 07

CAPABILITY 4 - Intelligence & Automation

AI and connected workflows that reduce repetitive work and improve decisions.

What it includes

- AI assistants and knowledge search
- Workflow and document automation
- CRM, email, calendar and payment integrations
- Operational dashboards and alerts
- Human approval and activity logging

When to sell it

Employees repeat the same work, information is scattered, or customers wait too long.

Sales line

We connect the work, remove repetition and keep people in control of important decisions.

Proof the website should show

Show one controlled automation: request → data lookup → proposed action → human approval → system update.

Do not overpromise

Do not call every chatbot an AI agent, and do not promise full autonomy.

SECTION 08

CAPABILITY 5 - Product Rescue & Reliability

Recover unfinished, unstable or difficult-to-scale software without rebuilding blindly.

What it includes

- Code and architecture audit
- Bug stabilization and performance work
- AI-generated code review
- Security and deployment assessment
- Testing, documentation and modernization roadmap

When to sell it

A startup or business already spent money, but the software is broken, delayed, insecure or trapped with a previous developer.

Sales line

We first determine what can be saved. Then we stabilize the product and create a clear path forward.

Proof the website should show

Show a sample Rescue Report with findings, severity, what to keep, what to replace and a 30/60/90-day plan.

Do not overpromise

Do not promise that every product can be repaired or quote a rescue before senior review.

SECTION 09

STEP 4 - How Aceva actually competes

The five capabilities are the offer. The delivery experience is the difference.

1

Three starting paths

I am starting something new. I need to improve my business. I already built something, but it needs help.

2

Proof Sprint

Before a large commitment, solve or demonstrate one narrow part of the problem and provide a roadmap.

3

Rescue Sprint

Package Product Rescue as a clear first engagement: audit, risk list, save/replace recommendation and recovery roadmap.

4

Human-reviewed AI

Use the line: AI-accelerated. Senior-reviewed. Production-ready.

5

Client ownership

Use the line: Your code. Your accounts. Your data.

6

Weekly proof

Show working progress, decisions, risks and tests every week instead of hiding until the deadline.

Aceva promise

Build new products. Improve existing businesses. Rescue software that other teams could not finish.

SECTION 10

STEP 5 - Website structure

Six pages are enough for version one.

1**Home**

Positioning, challenge selector, five capabilities, proof, process and final call to action.

2**Capabilities**

A dedicated section for each of the five offers with business language and examples.

3**Experiments**

Honest concept demos and internal products. Label them clearly; never present them as client work.

4**How We Work**

Understand → Design → Build → Launch → Improve, with weekly demos and client ownership.

5**Why Aceva**

New York market perspective, Pakistan engineering, leadership, principles and trust.

6**Start a Project**

A short qualification form and meeting booking path.

Navigation

Capabilities | Experiments | How We Work | Why Aceva | Build

SECTION 11

STEP 6 - Exact homepage content

Give this page to the design and content team.

Hero headline

"Build what your business needs next."

Supporting line

"Aceva designs digital experiences, custom software, mobile products and intelligent systems - and rescues products that need a stronger path forward."

Primary actions

Start a Project

For buyers with a clear idea or problem.

Explore Experiments

For visitors who want to see how Aceva thinks and builds.

Interactive question

"Where are you right now?"

- I am starting something new
- I need to improve my business
- I already built something, but it needs help

Five-capability section headline

"Five capabilities. One accountable engineering partner."

Trust lines

- AI-accelerated. Senior-reviewed. Production-ready.
- Your code. Your accounts. Your data.
- New York market insight. Global engineering execution.

SECTION 12

STEP 7 - What to show clients

No fake portfolio is required.

1

One premium website concept

Demonstrate Digital Experiences through Aceva's own website or a clearly labeled fictional brief.

2

One operations dashboard

Demonstrate Custom Software with a realistic business workflow and user roles.

3

One mobile prototype

Demonstrate a complete mobile user journey from sign-in to a useful outcome.

4

One automation flow

Demonstrate AI with human approval, logs and a clear business result.

5

One Rescue Report

Demonstrate how Aceva reviews an existing product and creates a recovery plan.

Important

These do not all need to be fully coded in month one. The website must have at least one real interactive proof. The remaining items can be polished prototypes labeled honestly.

SECTION 13

STEP 8 - One-month, zero-budget launch plan

Build only what helps Aceva sell and deliver the first client.

Financial truth

A professional custom domain normally costs money. With zero dollars, use company-owned free tiers and a temporary subdomain, or use an existing domain if Aceva already owns one. Never let a developer personally own the main accounts.

1

Week 1 - Decisions and design

Lock positioning, sitemap, five capability pages, visual direction, team roles, account ownership and wireframes.

2

Week 2 - Build the selling website

Develop Home, Capabilities, How We Work, Why Aceva and Start a Project. Connect forms and booking using free tiers.

3

Week 3 - Proof

Finish one real interactive demo, one polished dashboard prototype and the sample Rescue Report.

4

Week 4 - Test and launch

Mobile QA, browser QA, security basics, content review, analytics, deployment, outreach assets and launch.

Month-one finish line

A credible website, one unforgettable interactive proof, five sellable capability pages, a proposal template and a disciplined first-client process.

SECTION 14

STEP 9 - Team structure: 5 seniors + 5 juniors

Ten people are enough only if every person has one clear lane.

Senior 1 - Technical Lead Architecture, standards, final technical decisions and code review.	Senior 2 - Backend/AI APIs, database, authentication, integrations and automation.
Senior 3 - Frontend/Product Website, interactions, dashboards and mobile web quality.	Senior 4 - DevOps/Security Hosting, deployment, secrets, monitoring, backups and security checks.
Senior 5 - Product/QA Lead Requirements, acceptance criteria, testing, documentation and schedule.	Five Juniors Research, components, controlled features, tests and documentation under named mentors.

Rule

No junior change reaches production without a named senior review. Five part-time seniors are not the same as five full-time seniors, so write down each person's weekly availability.

SECTION 15

STEP 10 - Tomorrow's meeting agenda

Aim for decisions, not only motivation.

1**Vision - 10 minutes**

Explain that Aceva is a normal software house with a product-like website and proof-led delivery experience.

2**Five capabilities - 20 minutes**

Confirm what the team can genuinely deliver under each capability and list exclusions.

3**Website - 25 minutes**

Approve sitemap, homepage flow, exact copy, design direction and mobile behavior.

4**Proof - 20 minutes**

Choose the one real interactive demo and owners for the other prototypes and Rescue Report.

5**Technology and ownership - 20 minutes**

Confirm stack, accounts, deployment, security, review process and IP ownership.

6**People and deadlines - 20 minutes**

Assign one owner, one deliverable, one deadline and one reviewer to every task.

7**Final read-back - 10 minutes**

Repeat every decision and send written notes immediately after the meeting.

SECTION 16

STEP 11 - Decisions you must leave with

Do not close the meeting until these are written.

-
- Final public name for the software division and exact positioning sentence.
 - Approved six-page sitemap and version-one exclusions.
 - Exact owner for each of the five capability pages.
 - The one interactive proof that will be fully working at launch.
 - Owners and scope for the dashboard, mobile prototype and Rescue Report.
 - Technical Lead, Product/QA Lead and senior reviewer for every junior.
 - Approved stack and company-controlled domain, GitHub, hosting, analytics and design accounts.
 - Weekly milestones for all four weeks.
 - Internal review dates and public launch target.
 - Who responds to bugs and leads after launch.

Founder question

Which part of this plan is unrealistic with your actual weekly availability?
Ask this early. A smaller finished version is stronger than a huge unfinished promise.

SECTION 17

STEP 12 - Your opening speech

Speak naturally. Keep it under seven minutes.

Good morning, everyone. I want to make the direction of Aceva simple and clear.

We are opening a real software house. We will build websites, custom software, mobile products and intelligent automation. We will also help businesses that already invested in software but received something unfinished, unstable or difficult to scale.

Our goal is not to pretend these services have never existed. Global companies already sell them. Our goal is to present and deliver them more clearly, more honestly and with stronger proof than an ordinary software agency.

Aceva will sell five capabilities: Digital Experiences, Custom Software, Mobile Products, Intelligence and Automation, and Product Rescue and Reliability.

The fifth capability is important. Many companies already have a product, but it is broken, delayed or trapped with a previous team. We will not automatically tell them to rebuild. We will first determine what can be saved and create a responsible recovery plan.

Our website must feel like using a product, not reading a brochure. It should ask where the visitor is now, guide them to the correct path and show real proof of how we think.

We will use AI and modern coding tools for speed, but no AI tool will replace responsibility. Senior engineers will review production work, juniors will grow under mentorship, and clients will control their code, accounts and data.

We have one month and no operating budget, so we will not build everything. We will launch the selling website, one real interactive proof, strong prototypes and the systems required to win and deliver the first client.

I will lead market research, relationships, marketing and sales from New York. The CEO will run execution. The senior team will protect quality. The junior team will learn and contribute under review.

At the end of this meeting, every important item must have one owner, one deliverable, one deadline and one reviewer.

We will not compete by saying more. We will compete by proving more. Let us build Aceva properly.

SECTION 18

STEP 13 - Your sales language

Use business language with New York and global buyers.

Opening question What part of your business is costing the most time, money or customer trust right now?	New product We can turn the idea into a clear product scope, prototype and production build.
Business improvement We can connect the work, remove repetition and give the team better visibility.	Broken product We first determine what can be saved before recommending an expensive rebuild.
AI We use AI where it creates value, with human approval for important actions.	Ownership Your code, accounts and data remain under clear client or Aceva-controlled ownership.

Simple Aceva pitch

Aceva builds new products, improves existing operations and rescues software that needs a stronger path forward.

SECTION 19

STEP 14 - Launch checklist

Version one is ready only when these pass.

- The homepage explains Aceva in under one minute.
- All five capabilities are clear and do not overpromise.
- At least one interactive demonstration works on mobile.
- Concept work is labeled honestly.
- No fake clients, testimonials, statistics or awards are shown.
- Forms are tested and leads reach the correct person.
- The website is usable on common phones and browsers.
- Company-controlled accounts own code, design, hosting and analytics.
- Privacy, terms and basic security controls are present.
- The team knows who maintains the site after launch.

Final standard

The website should make a New York buyer comfortable booking a conversation - not merely make developers impressed by animations.

SECTION 20

STEP 15 - Market references and final warning

Use these sources as benchmark evidence, not as designs to copy.

Thoughtworks - Legacy Modernization

<https://www.thoughtworks.com/en-us/what-we-do/legacy-modernization>

Thoughtworks - AI at Work / Product Delivery

<https://www.thoughtworks.com/>

10Pearls - Artificial Intelligence Services

<https://10pearls.com/artificial-intelligence/>

10Pearls - Legacy Software Modernization

<https://10pearls.com/modernization/>

Work & Co - AI and Product Consultancy

<https://work.co/ai/>

Work & Co - Client Work

<https://work.co/clients/>

Final warning

Aceva's website can look ahead of the market, but trust will come from delivery. Never claim capabilities, security, clients or results that the team has not yet proven.

"The website earns the meeting. The work earns the reputation."
